

How To Gain 2000+ Installs Per Day.

Notice:

First things first, please do not leak this ebook. If you get a copy of this ebook which you did not purchase from me directly, please contact me as soon as possible with how you came about getting the pirated copy.

You alone are responsible for what you use this ebook for. I am only giving a guide on how it can be done, carrying out the steps in this ebook can get you into trouble and I can in no way be held responsible for this.

This ebook can only show you the steps on how to gain 2000+ installs per day, it is up to you to put the work in and use your brain. If you don't use basic knowledge or follow the guide properly then you will not get all of the installs you originally could. 2000+ is a ball park figure of what you can gain if you put the work in, different people will get different amounts of installs.

What You Need:

1. A small investment of \$5.00 (this is cheap for the amount of installs you can receive).
2. Some basic knowledge of R.A.T.S / Java Drive By.
3. A F.U.D Server. (If your server is not F.U.D you might not get all installs, also please make sure your server is not corrupt in anyway).
4. Hosting, paid or free is fine
5. A domain, paid or free is fine
6. Setup A Java Drive By JDB on your hosting
7. MapleStory, it's a game with up to 50,000+ players online at any one time. (I recommend using MapleStory USA servers, they are more populated however MapleStory Europe is fine).

Okay, so let us talk about the Hosting. You can use paid or free hosting, it doesn't matter at all, if you want to use free then I would suggest 000webhost.com.

This also goes for the domain, you can use free or paid it has no big effect although if you want to use a free domain I again would recommend a site called co.cc (Google it)

When picking the domain I would suggest picking something to do with MapleStory NX (NX is the in game currency for MapleStory) as this is what we will be using to spread with and the better the domain the better your chances are of getting more installs.

Once you have your domain registered and hooked up to your hosting, go ahead and setup a Java Drive-By (otherwise known as JDB), I will not show you how to do this as there are already lots of tutorials on how to set one up on HF but if I could give you one suggestion I would tell you to use a website template which is something to do with MapleStory itself.

Please remember the better the template you get, and the better domain you register will help a lot when it comes to getting visitors.

After installing MapleStory you will need to play for a while until you get out of the tutorial world, this will not take long at all.

At this stage I expect you to have

1. FUD Server
2. Java Drive By linked to your website
3. MapleStory installed and completed Tutorial World.

In Game Spreading.

Spreading in game is easy, all you have to do is advertise something which will make people want to visit your website. Some people like to advertise MapleStory NX Codes (NX is used in MapleStory to purchase in game items).

Here is where you will need to use your initial \$5.00 investment. you will need to purchase some NX yourself, to do this you can use many different payment options .

To get NX you will need to go to the MapleStory website and click “Purchase NX”, like I said this will cost 5USD.

Once you have purchased 5USD worth of NX you will need to go back into your game.

Once in game you will need to click “CASHSHOP” which is located at the bottom of the screen towards the right hand side in RED.

(When you are in the shop you will need to purchase some Megaphones (as many as your NX will allow you to))

Megaphones look something like this , it will allow you to type ingame to everyone in the server world at once thus revealing your message to 50,000+ players.

Type something ingame and include your website link, such as "Get your free NX Cash Codes @ (YOURWEBSITE) in just 2 Minutes!!!"

You will want to make your message unique to your liking to make sure you get the best amount of visitors, once they visit your website your Java Drive By will take care of the rest.

Now sit back and watch your R.A.T installs grow, once they have installed you can run your Keylogger/Stealer and use/sell there MapleStory account.

**THANK YOU FOR PURCHASING MY EBOOK IT MEANS A LOT 😊
PLEASE DO NOT LEAK THIS EBOOK AND OF COURSE GOOD
LUCK SPREADING.**

I HOPE YOU GET MANY INSTALLS FROM THIS METHOD.
