

Inspector Gadgets guide to getting up to 8000 rat downloads a day!

Welcome to my guide on getting up to 8000 rat downloads a day.

If you have received this for free then I deem you a trusted member of hackforums, and I trust you to use this and not give it out.

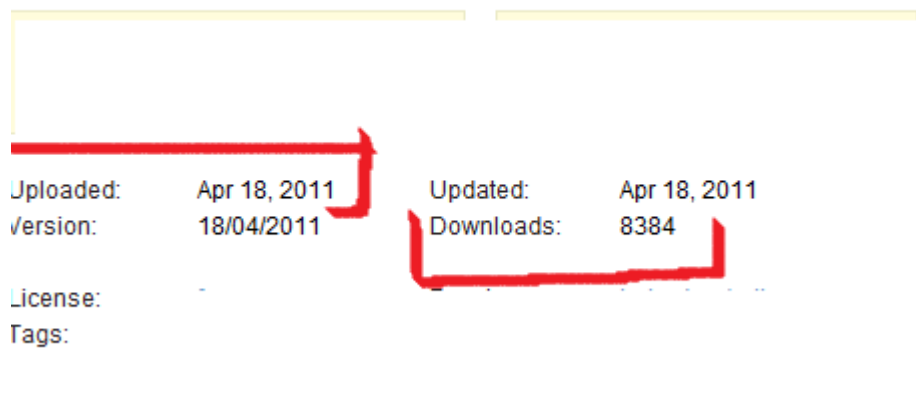

If you have paid for this then congratulations on your awesome purchase.

I will keep this guide short and simple to minimize confusion.

I tried a method I didn't think would work but it did and it worked damn well!

Rate: ★★★★★ Awesome! 2 votes

Now this method is not a 100% win and it depends on what you are giving away but for me it worked well as I saw a gap in the market.

How to get up to 8000+ rat downloads a day

What you will need:

- A brain
- A 100% fud rat
- Good eye for gaps in the market
- Phone app knowledge
- Good paint/google skills

The method:

1. make your server 100% fud and prepare it to be spread
2. Sign up to any “free mobile app” websites, they must allow windows mobile!
3. Find an app that isn't there or is well looked for (I used runescape mobile and teamviewer mobile)
4. rename your rat to that of your app name and upload it to the mobile app websites under windows mobile, it has to be windows mobile type as it allows .exe files to be uploaded.
5. paint a fake screenshot or real screenshot and upload it to the site
6. enter your app to there website and wait for downloads ☺

Websites I used:

<http://www.mobango.com/> (screenshot is from mobango)

<http://www.getjar.com/>

<http://mobilclub.mobi/> There are many more sites you can use, google is your friend.

How to make them install on there computer:

This is where you have to become creative, you need to convince them that it needs to be installed on a computer then information filled in or whatever then moved to there phone. What you say is up to you.

Now 3 things could happen with this..

1. they don't download it
2. they download it on there phone
3. they download to there pc, infect there pc then move to there phone, then when there phone gets plugged in anywhere it infects the computer if run there. AWESOME!

This method isn't known by many ive never heard or seen of this being used so im going to assume its barely used ☺.

Enjoy the guide guys don't forget to vouch on my thread.
