

# **The Modernised Technocratic Model Information Document**

Revision: 2

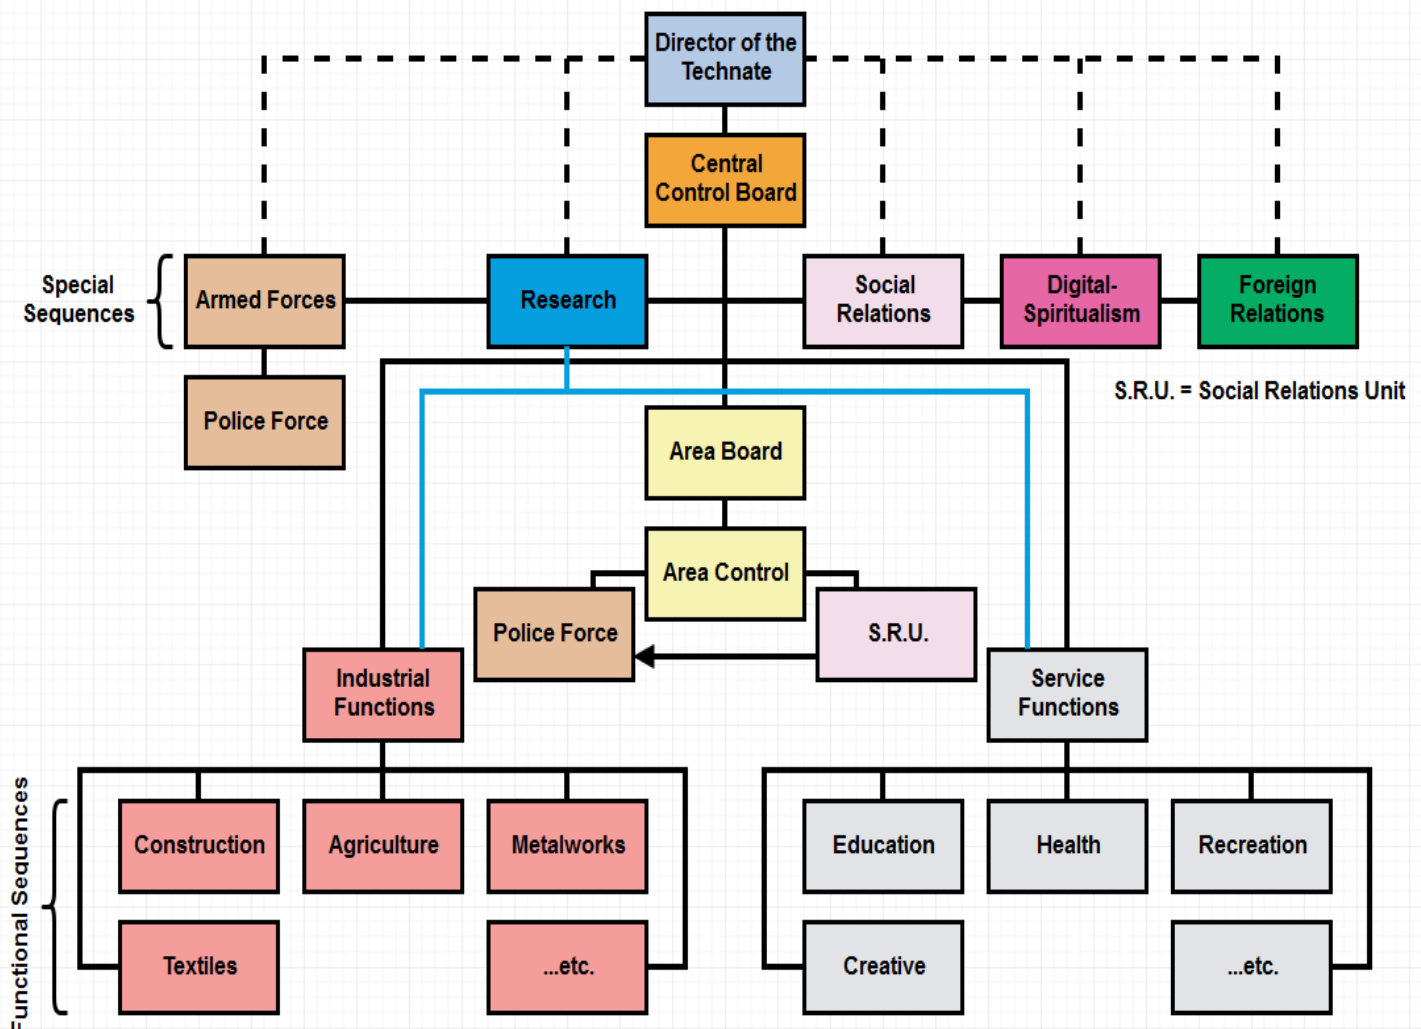

Language: English

Presented by: /urbanate/

## Goals of the MTM:

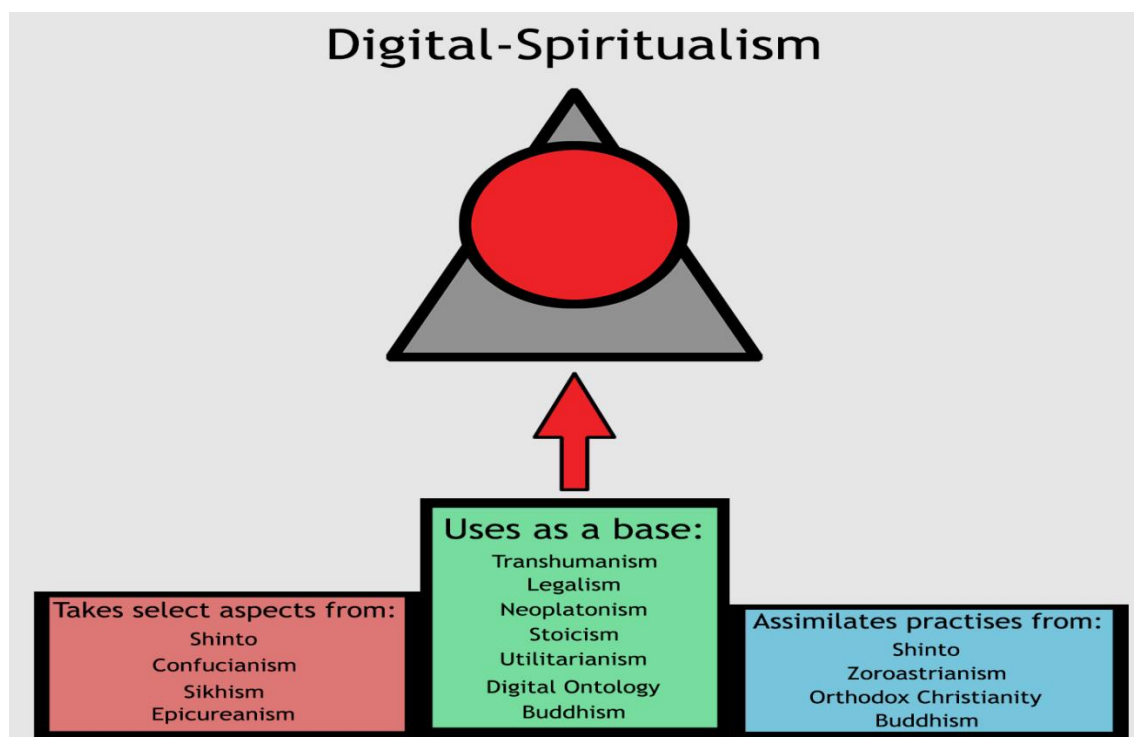

- To archive a post-scarcity economy based upon the principles of Thermoeconomics and energy accounting.
- To unite the entirety of our species under a single, global government - the Technate.
- The banishment of poverty, disease, war, hunger, politics, selfishness, class, individualism and natural death.
- To bring about the technological singularity as soon as possible.
- To achieve effective immortality via the digitisation of brains and consciousness.
- The creation of a Matrioshka brain.

## Technate Administration Chart

## Social and Religious Policy:

- As a part of creating a Technate that is both global and stable. The MTM aims to create a Monocultural Technate. This Monoculture will combine the traits of human cultures (including extinct, historical cultures) that are the most compatible with social stability.
- The MTM Technate will adopt the logical and (relatively) culturally neutral language of Lojban as its official language.
- The MTM Technate will replace existing religious systems with a state system of “Digital-Spiritualism”. This system rejects the supernaturalism and the antiquated dogma that is prevalent in current religion. The goal of Digital-Spiritualism is to provide an outlet for healthy spiritual fulfilment and to further install positive attributes and role models in the mind of the populace.
- A large goal of Digital-Spiritualism itself is to hasten the creation of an AI. This AI will eventually be given total control over all computers in the Technate, not only allowing for it to take over the functions of governance but to achieve effective omnipresence. Essentially crating our species own artificial Deity.
- The MTM will assign positions within itself based upon a person’s demonstrated technical ability.
- The MTM shall abolish both social and economic classes. Everyone within the Technate shall simply be a Citizen.
- The Technate shall implement and operate on a functional calendar. A calendar in in which the days of the year are listed consecutively, one through three hundred and sixty-five.

## Education Policy:

- The educational period of a Technate citizen would last twenty years, from the age of five through to twenty-five.
  - Education within the Technate would be broken up into three different phases.
    - The first phase of education would be the primary phase; it would cover all of the educational elements that every citizen of the Technate will require - regardless of later profession.
    - Secondary education would be provided in three different streams. At the end of their primary schooling, citizens would be placed into a secondary stream based on their aptitude, interests and psychological profile.
      - Academic - This stream would provide citizens with both a well-rounded view of general academic subjects and specialised education in the field that the student chooses (STEM fields would have the highest intake levels, art and related subjects would have strict numbers limits). All students in this stream will have gained a Doctorate in their chosen field at the end of their educational period.
      - Vocational - This stream would provide citizens with both a base level, general education in many different vocational fields (Primarily: Construction, basic Nursing and Information-Technology) and specialised education in a professional trade.
      - Military - This stream would provide citizens with all of the education and training required to be the most adaptable and professional military force our species has ever seen. Officer candidates would be selected from the most suitable citizens after three years in this stream.
    - The final phase of education in the MTM Technate is State Service. State Service would start at the age of twenty-one and last until the age of twenty five. For more information, refer to the **Military Policy** section.
-

## Economic Policy:

- The MTM Technate will abolish all forms of price system (Capitalism, Socialism, Fascism, etc.).
- The MTM Technate will create a twenty-four hour inventory control. A system that will allow for all items and resources to be monitored and tracked in real time, from production to final distribution.
- The MTM Technate aims to eventually replace all human labour with automation.

## Labour policy:

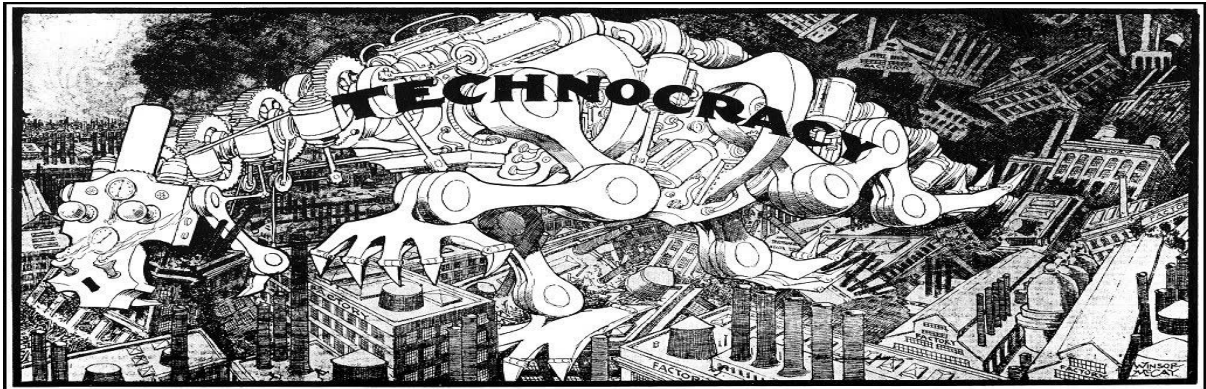

- A citizen of the Technate will work for the Technate from the age of twenty-five to forty-five. At the age of forty-five, the citizen will retire from work.
- The average working week of the Technate worker will be four hours a day, four days a week.
- All labour complaints will be handled by the department of labour relations (a sub-department of the department of Social Relations). This will make workers unions obsolete.
- All workers will be organised into seven work groups, operating on a staggered work schedule - this will ensure that the Technate is productive every single day of the year.
- Each work group would further be broken up into six different work shifts (four hours to a shift); this will ensure that the Technate is productive twenty-four hours a day.

---

Group VII ....	☉	☉	☉	☐	☐	☐	☉	☉	☉	☉	☐	☐	☐	☉	☉	☉

## Legal policy:

- The MTM will do away with lawyers and jurors. All cases will instead be presented before a panel of three judges. The agreement of at least two of the judges is required for a conviction.
- The maximum number of years that a person can be incarcerated for is twenty years. In the event that a person is found guilty of crimes that combined hold a sentence of more than twenty years, that person is executed.
- The vast majority of convicts will spent their sentence in rehabilitative labour facilities. Traditional prisons will only be for those that are too infirm for rehabilitative labour; these prisoners will instead be required to serve the Technate by regularly giving blood.
- All punishments will be collective. For example, a person that has information on criminal wrongdoing but does not come forward will receive the same punishment as the criminal.

## Health policy:

- The Technate will provide an unprecedented level of health care to its citizens. This care will be provided as a free service to all citizens.
  - The Technate will ensure that the distribution of healthcare staff and the population of healthcare staff are at such a level that waiting lists for all but the most complicated of medical procedures no longer exist.
  - The Technate will practise a strict system of eugenics. The goal of this program is to eliminate genetic disorders.
  - Any child born with defects that would limit their ability to participate in society would be quickly and humanely euthanized.
  - The Technate will legalise drugs that are demonstrated to have a low direct impact on health and social unity.
  - Euthanasia will be freely available to all Technate citizens of sound mental health.
- 

## The Technate Agoge:

- Immediately following birth (assuming that no defects are found), every child born in the Technate will be placed under the care of the Technate.
- All children will remain in Technate care facilities until the start of their State Service (Age 21).
- The Technate Agoge will ensure that the children of the Technate will experience an optimal childhood and adolescence. Damaging factors such as poor parenting, poor socialisation or limited access to medical, psychological and educational services would not exist in a Technate.
- While the purpose of the Spartan Agoge (of which the Technate Agoge is modelled off) was to create the best solders possible, the purpose of the Technate Agoge is to simply create the best Citizens possible.
- Parents would be provided with periodical updates on their children, however physical contact would not be allowed until the end of the Agoge.
- Freed from the burden of having to raise children, Technate parents will be able to further enjoy their lives, without the major disruptions of raising children.
- It is hoped that without the need to raise any children that they produce, that the birth rate within the Technate will be quite high.

## Military policy:

- The military of the Technate is central to the MTM. The MTM views the military as a force of social unification, rather than petty conquest. The MTM Technate would aim for a society that is one-hundred percent militarised (militarised, not militaristic).
- The Technate will maintain two parallel military forces.
  - The Technate military would be comprised of the professional, career soldiers that were placed in the military stream during schooling. The Technate military will be comprised of two branches, the Mobile Infantry and the Fleet (an amalgamation of both the navy and air force).
  - The second military force will be the Citizens Guard. Unlike the Technate military, the Citizens guard is a purely defensive force of reservists. The Citizens Guard primary duty would be to maintain and construct the extremely extensive defensive fortification systems that the Technate will build all over the world.
- At the age of twenty-one all citizens (not in the military education stream) are required to serve in the Citizens Guard fulltime. This period of State Service would continue fulltime, until the age of twenty-five. After the end of their State Service, citizens will still be classed as part of the Citizens Guard and required to attend periodic training a set amount of times per year. Citizens will be relieved of their duties in the Citizens Guard when they turn forty-five (the age of retirement).
